

## **This week on the course**

### **Monday 15th July**

The greens were verti cut to the depth of 3mm and cut, the tee boxes were also cut. A selective weed killer was applied to the fairways and aprons on holes 1,2,4,16,17 & 18, this was applied to help combat the growth of clover which is currently thriving. when the chemical is applied it is recommended that the playing surface is not to be mown for a couple of day prior and following the application, thus meaning that the surfaces may look long and untidy.

### **Tuesday 16th July**

The greens were cut then followed up with a dressing of sand, the sand was brushed in and then a follow up cut to help work the dressing in further. The remaining aprons and all of the tees were sprayed with the remaining selective weed killer. Low hanging branches along the side of the path to the pro shop and also around the practice nets were trimmed.

### **Wednesday 17th July**

Following a damp start to the day the greens were switched, bunkers were fully raked and the pin positions were changed. The two new practice nets were put up a brought into play. The aprons and the 1st cut of semi were cut and the par 3s tee boxes were seeded and dressed out with rootzone.

### **Thursday 18th July**

Today the greens were cut, bunkers fully raked and the pin positions changed. tees were cut and the cutting of the fairways, semi rough and some copses around the course began.

### **Friday 19th July**

Greens and aprons were cut, bunkers and tee markers were checked, cutting of the semi rough was continued and the fairways were completed. The bins around the course were emptied and the ball washers were topped up. The tee area on the practice area which had previously been over seeded, top dressed and fertilised had been cut and now brought back into play.
